| • BOOTSTRAP  | • PYTHON(BASIC) |
| • JAVASCRIPT | • JQUERY        |

## PROJECTS

Capstone Project on Credit Risk Analysis:

- XYZ Lending corp. provided credit data for customers from 2007 to 2015. The data was used to create a model to predict whether a particular customer will default the next time he takes a loan.
- The model was created using a python Jupyter notebook applying various machine learning algorithms to it. Various visual insights were generated using tableau which helped in generating future insights which helped in identifying important factors and minimizing future losses for the bank.
